# How To Guide
Indoor Power Supply (PSU-0039)

How To Connect Your Indoor Power Supply

1. Connect the power supply to the Molex Mini-Fit™ 2 x 2 receptacle and then connect the green and white breakout wires to the ignition and I/O connections as required. The diagram below illustrates the wiring layout of the Molex connector.

2. Select the correct head for the wall socket type in your country and slide it onto the power adapter as shown below.

3. Insert the adapter into the wall socket and turn on the mains power. The power LED on the router lights up when a power source is connected.
