Product Overview

The OMNI-902 is a high gain, ultra-wideband antenna, which covers all contemporary LTE/5G frequency bands with excellent balanced gain across all frequencies from 617 to 4200 MHz. The antenna offers 2x2 MIMO capability from its vertically separated radiating elements, all in the same single radome. The antenna design combines two high gain omni-directional antennas, which allows for superior pattern control over the entire frequency range. The combination of high gain omni-directional antennas makes the OMNI-902 a true omni-directional 2x2 MIMO antenna, suitable for marine and coastal applications.

The antenna comes with an IP68 protection rating against dust and water ingress, making it ideal for most severe storms at sea. The radome is also fully salt water protected so that it can be used in highly corrosive environments, thanks to the fiberglass radome material. The OMNI-902 guarantees signal reception almost everywhere and is usable in all part of the world. The ultra-wideband performance makes the antenna future proof, as it covers LTE Band 71 (617 to 698 MHz) as well as the CBRS bands from 3400 to 4200 MHz for inland use.

Antenna Performance Plots

VSWR

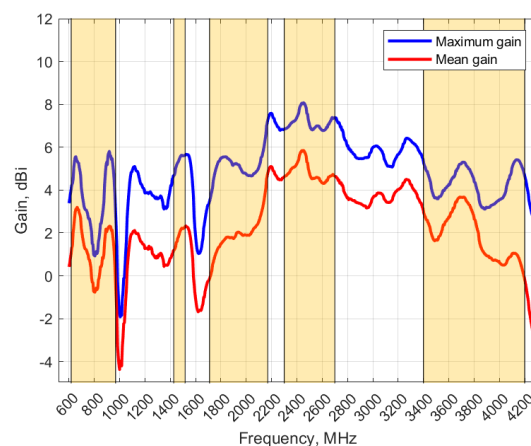

Voltage Standing Wave Ratio (VSWR)*

VSWR is a measure of how efficiently radio-frequency power is transmitted from a power source, through a transmission line, into a load. In an ideal system, 100% of the energy is transmitted which corresponds to a VSWR of 1:1.

The OMNI-902 delivers superior performance across all bands with a VSWR of 2.5:1 or better across 90% of the bands.

*VSWR measured with 2m low loss cable

GAIN (EXCLUDING CABLE LOSS)
